

VenueOne — Handover Document

Last updated: June 28, 2026
Prepared for: Project continuity / next developer or stakeholder
Author: Peculiar AI Labs (development session)

1. Executive Summary

VenueOne is a mobile-first stadium concession ordering demo for **Riverside Arena**. It simulates a full event-night operations stack in a single React SPA:

Role	View	Purpose
Fan	fan	Browse menu, customize items, order pickup or seat delivery, track status, play Soccer Bingo
Staff	staff	Kitchen queue — advance orders through prep stages
Runner	runners	Claim and deliver seat-delivery orders
GM	analytics	Live revenue, charts, runner stats, PDF recap export

There is **no backend server** in this repo. All order data persists in the browser via a storage abstraction (`localStorage` by default). Multiple tabs on the same device share the venue ledger through a prefixed shared key.

2. Live & Source

Resource	URL / Location
Production	https://venueone.vercel.app
GitHub	https://github.com/smacgruder-web/VenueOne
Local path	<code>/Users/ll/Downloads/Peculiar App/VenueOne</code>
Vercel project	venueone (auto-deploys from main)

Latest commits on `main` (as of handover):

```
00d4951 Pin all venue times to US Eastern (America/New_York)
e2daac0 Replace Soccer Bingo flip card with full-page invite flow
f9ca984 Add Soccer Bingo with header CTA, menu flip card, and prizes
a04a1fa Replace flip cards with full-screen item detail page
7a49a88 Mobile-first layout: bottom nav, safe areas, responsive grids
```

Working tree is **clean** — all session work is committed and pushed.

3. Tech Stack

Layer	Choice
-------	--------

Framework	React 18 + TypeScript
Build	Vite 5
Animation	Framer Motion
Styling	Tailwind CSS 4 (utilities) + <code>src/index.css</code> (component styles) + <code>src/styles/venueStyles.ts</code> (inline style objects for legacy views)
Icons	Lucide React (sparse use)
Storage	<code>window.storage</code> abstraction → <code>localStorage</code> fallback
Deploy	Vercel (static dist/)

Requirements: Node.js 18+

```
npm install
npm run dev      # http://localhost:5173
npm run build    # tsc + vite build → dist/
npm run preview  # serve production build locally
```

4. Architecture

```
flowchart TB
    subgraph App["App.tsx"]
        VS[useVenueState]
        FI[useFanIdentity]
        RI[useRunnerIdentity]
        SB[useSoccerBingo]
    end

    NavBar --> App
    App --> FanView
    App --> StaffView
    App --> RunnerView
    App --> AnalyticsView

    FanView --> MenuItemCard
    FanView --> MenuItemDetailPage
    FanView --> SoccerBingoPromoCard
    FanView --> SoccerBingoInvitePage
    FanView --> SoccerBingoPage

    VS --> Storage["ensureStorage() / localStorage"]
    SB --> LS1["localStorage (bingo state + prizes)"]
    FI --> LS2["localStorage (fan session)"]
    RI --> LS3["localStorage (runner identity)"]
```

State ownership

Hook	Storage key	Scope
useVenueState	venue-ledger-v1 (shared)	Orders + event stats — synced across dashboard sessions on same device
useFanIdentity	my-fan-state-v1	Active order tracking, order history IDs
useRunnerIdentity	my-runner-state-v1	Selected runner name
useSoccerBingo	venueone-soccer-bingo-v1, venueone-soccer-bingo-prizes-v1	Board state + unclaimed prizes

Auto-progress timers in `useVenueState` simulate kitchen/runner workflow (`src/utils/order.ts` , intervals in `src/config/app-config.ts`).

5. Key Files

Entry & routing

File	Role
<code>src/main.tsx</code>	React mount
<code>src/App.tsx</code>	View switcher, bingo modal state, hook wiring
<code>src/components/NavBar.tsx</code>	Top header + mobile bottom nav; Soccer Bingo CTA on fan view

Views

File	Role
<code>src/views/FanView.tsx</code>	Primary fan UX — menu grid, cart, checkout, order tracking, bingo
<code>src/views/StaffView.tsx</code>	Kitchen order board
<code>src/views/RunnerView.tsx</code>	Delivery claim/dispatch
<code>src/views/AnalyticsView.tsx</code>	GM dashboard, charts, PDF recap

Menu & ordering

File	Role
<code>src/data/constants.ts</code>	Menu items, sections, runners, <code>VENUE_TIMEZONE</code> , fees
<code>src/data/menuCustomizations.ts</code>	Per-item mod groups (size, toppings, etc.)
<code>src/components/MenuItemCard.tsx</code>	Grid card — tap photo/name opens detail; + is separate
<code>src/components/MenuItemDetailPage.tsx</code>	Full-screen item page with mods and add-to-cart
<code>src/utils/cartMods.ts</code>	Line keys, mod application, cart line formatting
<code>src/utils/menuRelated.ts</code>	"You might also like" suggestions

Soccer Bingo

File	Role
src/data/soccerBingo.ts	Events, 5x5 board generation, win detection, prize types
src/hooks/useSoccerBingo.ts	Game state, sim play, prize claiming
src/components/SoccerBingoPromoCard.tsx	Menu grid promo (inserted after 2nd food item)
src/components/SoccerBingoInvitePage.tsx	Full-screen invite (mirrors menu detail layout)
src/components/SoccerBingoPage.tsx	Full-screen game board
public/images/soccer-ball.png	Promo + invite hero image

Deleted: `src/components/SoccerBingoFlipCard.tsx` — removed in favor of full-page flow.

Utilities & config

File	Role
src/utls/format.ts	Money, time (Eastern), IDs
src/utls/analytics.ts	Bucket charts, CSV export, PDF recap HTML
src/lib/storage.ts	Storage API shim
src/config/app-config.ts	Feature flags, auto-progress intervals
src/index.css	Global + component CSS (menu cards, bingo, live badge, safe areas)

6. Fan Ordering Flow

1. Fan lands on menu (`FanView`) — section 103 by default.
2. **Pickup** or **Seat Delivery** (+\$2.50 fee) selected before ordering.
3. Tap food photo or name → `MenuItemDetailPage` (full screen, not in-card flip).
4. Customizations applied per line item; `+` on grid card quick-adds with current mods.
5. Checkout sheet → place order → status tracking screen with toast notifications.
6. **Reorder** available after pickup ready or delivery complete.

Cart & prizes

- Cart lines keyed by `itemId + mod selections` (`buildCartLineKey`).
- Soccer Bingo prizes auto-apply at checkout:
 - `free_delivery` — waives \$2.50 delivery fee
 - `five_off` — `Math.min(5, itemsTotal)` off food/drinks (caps at cart subtotal)
- Prize claimed on order submit via `claimPrize()` .

7. Soccer Bingo Flow

Promo card or header "🏈 Soccer Bingo"

↓

```
SoccerBingoInvitePage (full screen)
  ↓ [Play Now]
SoccerBingoPage (game)
  ↓ [5 in a row]
Prize stored → auto-applies on next checkout
```

- Promo card inserted in food grid after the **2nd food item** (`FanView.tsx` `flatMap`).
- Header CTA in `NavBar` switches to fan view and opens invite.
- **Sim Live Match Play** button marks random matching cells for demo/testing.
- Board center cell (index 12) is FREE and always marked.

Prize types (`src/data/soccerBingo.ts`):

Type	Label	Checkout effect
free_delivery	Free Seat Delivery	Delivery fee → \$0
five_off	\$5 Off Coupon	Up to \$5 off items subtotal

8. Timezone

All displayed times use **US Eastern** regardless of device timezone:

- Constant: `VENUE_TIMEZONE = 'America/New_York'` in `src/data/constants.ts`
- Formatters: `fmtTime` , `fmtLiveVenueTime` , `fmtDateTime` in `src/utils/format.ts`
- **LIVE badge** (`LiveEventBadge.tsx`): ticks every second — e.g. `LIVE · 8:31 PM EDT`
- Staff clock, order history, analytics buckets, CSV/PDF exports — all Eastern

9. Mobile UX (completed work)

These were explicit user-driven fixes during the build session:

Issue	Fix
iPhone 12 menu overlap / hidden +	Caption bar layout, separate info CTA vs add button
Food photos cropped (top half only)	<code>object-fit: cover</code> , full-card photo, compact caption overlay
Small in-card flip for menu/bingo	Replaced with full-screen pages (<code>MenuItemDetailPage</code> , <code>SoccerBingoInvitePage</code>)
Bottom nav safe areas	<code>env(safe-area-inset-*)</code> on header and bottom nav
LIVE badge static/broken	Real Eastern wall clock with pulse dot

10. Styling Conventions

The codebase uses a **hybrid** approach (intentional, not fully migrated):

- **Newer components** (menu cards, bingo, nav): Tailwind classes + `src/index.css`

- **Older views** (staff, runner, analytics sheets): `src/styles/venueStyles.ts` inline `CSSProperties`

When extending UI, match the pattern of the file you're editing. Menu and fan-facing surfaces prefer `index.css` + Tailwind.

11. Assets

Path	Contents
<code>public/images/menu/*.jpg</code>	Menu item photos (versioned via <code>MENU_IMG_VERSION</code> in constants)
<code>public/images/soccer-ball.png</code>	Soccer Bingo branding
<code>public/images/hero-*.jpg</code>	Legacy hero assets (FoodHero uses menu images now)
<code>branding/</code>	Brand assets
<code>Venue0ne.jsx</code>	Legacy standalone file — not the active entry point (<code>src/App.tsx</code> is)

12. Deployment

Vercel deploys automatically on push to `main`.

```
git push origin main # triggers production deploy
```

Local Vercel link metadata lives in `.vercel/` (gitignored). No environment variables are required for the current static build.

Build output: `dist/` (Vite default).

13. Known Limitations

Area	Limitation
Persistence	Browser-only; no real multi-device sync without wiring <code>window.storage</code> to a cloud backend
Auth	None — anyone can access staff/runner/analytics views
Soccer Bingo	Simulated events only; no live sports data feed
\$5 off prize	Discount capped at cart subtotal (<code>Math.min(5, itemsTotal)</code>) — a \$4 cart gets \$4 off, not \$5
Order simulation	Auto-progress timers are demo shortcuts, not real kitchen integration
<code>api-config.ts</code>	GCS backup URLs configured but not actively used in the static demo

14. Suggested Next Steps

Priority ideas for the next developer:

1. **Real-time sync** — Replace `localStorage` shared ledger with WebSocket or Cloudflare Durable Objects for true multi-device staff/fan sync.
2. **Live sports feed** — Wire Soccer Bingo events to a match API instead of `simPlay`.
3. **Prize rules** — Clarify whether `$5 Off` should always be \$5 (store credit) vs. capped to order total.
4. **Style consolidation** — Migrate `venueStyles.ts` inline styles to Tailwind + CSS for consistency.
5. **Auth / role gating** — Restrict staff/runner/analytics views in production.
6. **PWA** — Add service worker for offline menu browsing at venue.

15. Related Projects

Project	Path	Notes
Baseball Bingo (source)	<code>/Users/ll/CITA Apps/Baseball Bingo/stitch_interactive_baseball_bingo</code>	Original bingo UI inspiration; converted to soccer for VenueOne
Peculiar branding	<code>src/components/PeculiarLogo.tsx</code>	Logo in header

16. Quick Reference — LocalStorage Keys

<code>venue-shared:venue-ledger-v1</code>	# Orders + stats (shared)
<code>venue-local:my-fan-state-v1</code>	# Fan session
<code>venue-local:my-runner-state-v1</code>	# Runner selection
<code>venueone-soccer-bingo-v1</code>	# Bingo board
<code>venueone-soccer-bingo-prizes-v1</code>	# Unclaimed prizes

Clear these in DevTools → Application → Local Storage to reset demo state.

17. Support Checklist for New Maintainer

- ☐ Clone repo, `npm install`, `npm run dev`
- ☐ Confirm <https://venueone.vercel.app> loads after any push
- ☐ Test fan flow on iPhone: menu photo → full detail → add → checkout
- ☐ Test Soccer Bingo: promo card → invite page → Play Now → win → prize at checkout
- ☐ Confirm LIVE badge shows Eastern time
- ☐ Review `src/config/app-config.ts` feature flags before production hardening
- ☐ Read this doc + `README.md`
